

# How to Install and Run the Tor Service

---

## Linux (Ubuntu/Debian-based systems)

### ✓ Step 1: Install Tor

```
sudo apt update  
sudo apt install tor -y
```

### ✓ Step 2: Start and Enable Tor Service

```
sudo systemctl start tor  
sudo systemctl enable tor
```

### ✓ Step 2: Verify It's Running

```
systemctl status tor
```

## Windows

### ✓ Step 1: Download Tor Expert Bundle

Go to:

👉 <https://www.torproject.org/download/tor/>

Download "Expert Bundle" for Windows (ZIP format).

### ✓ Step 2: Extract and Configure

- Extract the ZIP file to a folder, e.g. `C:\Tor`
- Open `torrc` in a text editor (you can create one if missing)

Example basic config:

```
SocksPort 9050  
ControlPort 9051  
HashedControlPassword 16:MYHASHEDPASSWORD
```

### ✓ Step 3: Run Tor

- Open Command Prompt
- Navigate to folder:

```
cd C:\Tor  
tor.exe -f torrc
```

Tor will start and listen on ports 9050 (SOCKS5) and 9051 (control).
